CHAPTER 1

Foundations of Probability Theory

1.1 Probability Axioms and Conceptual Foundations

1.2 Conditional Probability, Inclusion-Exclusion, and Independence

1.3 Combinatorics and Counting Principles

1.3.1 Permutations and Combinations

1.3.2 Stars and Bars

CHAPTER 2

Random Variables

2.1 Probability Distributions

2.2 Expectation and Variance

2.3 Transformations of Random Variables

2.4 Limit Theorems

2.4.1 Law of Large Numbers

2.4.2 Central Limit Theorem

CHAPTER 3

Advanced Expectation

3.1 Linearity of Expectation

3.2 Indicator Variables

3.3 Coupon Collector Problem

3.4 Markov Chains

3.5 Runs and Sequences

3.6 Random Walks

3.6.1 Gambler's Ruin

3.7 Game Theory and Nim

CHAPTER 4

Advanced Counting Techniques

4.1 Derangements

4.2 Vandermonde's Identity

4.3 Burnside's Lemma

4.4 Distinguishability

4.5 Catalan Numbers

4.6 Generating Functions

4.7 Pigeonhole Principle

4.8 Partitions

4.9 Recurrence Relations

Appendices

APPENDIX A

Title

There once was a very smart but sadly blind duck. When it was still a small duckling it was renowned for its good vision. But sadly as the duck grew older it caught a sickness which caused its eyesight to worsen. It became so bad, that the duck couldn't read the notes it once took containing much of inline math just like its favoured equation: $d = u_c \cdot k$. Only displayed equations remained legible so it could still read

$$d = ra^ke.$$

That annoyed the smart duck, as it wasn't able to do its research any longer. It called for its underduckling and said: "Go, find me the best eye ducktor there is. He shall heal me from my disease!"
